

EMPOWERING INFORMATION SOLUTIONS

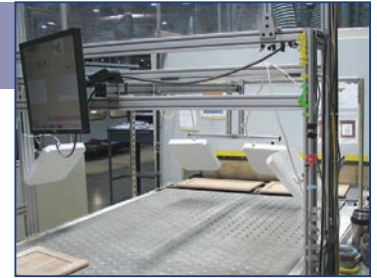

CabineTrack™

Automated Component Tracking

Process Control

RFID can track components through these processes and verify each step is completed correctly and efficiently:

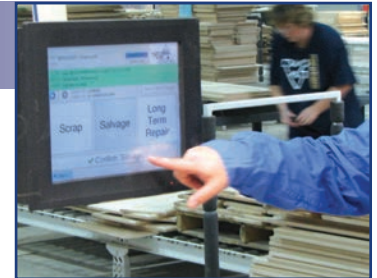

- ▶ Sanding
- ▶ Polishing
- ▶ Assembly
- ▶ Dusting
- ▶ Drying
- ▶ Staining
- ▶ Storage
- ▶ Clear Coating
- ▶ Kitting

Quality Control and Rework

When components are removed from normal production flow, RFID can note where, when, and why they were removed. RFID will also note when the components are returned to normal flow. Components marked as 'scrap' are noted in the system and a replacement work order is automatically produced.

- ▶ Quality
- ▶ Rework Traceability

RFID in Inventory Management

RFID gives you the ability to conduct a highly accurate — rapid inventory, and reduce labor costs. Up-to-date inventory information is fed directly into your inventory management system.

- ▶ Cycle Counting
- ▶ Material Management
- ▶ FIFO Monitoring

RFID in Outbound Order Fulfillment

RFID enables automatic order sequencing and validation when loading the truck for delivery.

- ▶ Complete Order Fulfillment Management
