

RG950USB

The RG950 USB is one of Northern Apex's standard devices. It is used to initialize tags and also read the data contained on the tags. The RG950 is a universal device and can be used in various applications. We recommend the RG950 because of its low cost and ease of use. It is also a compact unit that can be placed next to the keyboard and connects via a USB link to any PC or workstation.

Features/Benefits

- ▶ Used as either a handheld or workstation read/write device
- ▶ USB Port powered
- ▶ Includes antenna and RFID coupler
- ▶ Typically used with portable data collection or PC devices
- ▶ Fits conveniently in a briefcase/carry case for portability
